Setup do Flutterfire

20

- O primeiro passo é instalar o Firebase CLI
- <https://firebase.google.com/docs/cli#install-all-cli-windows>

21

22

23

Comandos de terminal do VSCode

- `firebase login`
- `dart pub global activate flutterfire cli`
- `flutterfire configure`
- `flutter pub add firebase`

31

Realtime Database

32

Banco de dados em tempo real

- Banco de dados original do Firebase
- Solução eficiente e de baixa latência
- Hospedada em nuvem

33

Características

- **Realtime:** sincronização de dados em tempo real rápida
- Permite experiências colaborativas e imersivas sem se preocupar com o código de *networking*
- **Offline:** aplicativos continuam responsivos, pois o SDK mantém os dados no dispositivo. Quando a conexão voltar, o cliente recebe as atualizações perdidas

34

- **Acessível:** o banco de dados pode ser acessado diretamente de um aplicativo web ou móvel
- **Segurança e validação de dados** são disponíveis com simples regras do servidor

35
